

## Why CEREC?

CEREC delivers top quality restorations in one visit, so you can get back to your busy life. Here's what makes CEREC so special:

- Single visit convenience – no temporaries
- No uncomfortable impression trays
- Beautiful esthetics – color-matched ceramic
- Enamel-like materials – natural look and feel
- Clinically proven – millions of successful restorations worldwide

A CEREC restoration isn't just convenient, it is also healthy. Years ago, dentists could only use amalgam, gold and other metals to fix decayed and damaged teeth. With CEREC, your dentist can use strong, tooth-colored ceramic materials to restore your teeth to their natural strength and beauty. Also, CEREC is chemically bonded to your tooth, so your dentist can save as much healthy tooth tissue as possible, while providing you with a restoration that strengthens your tooth.

# CEREC®

## One-visit dentistry

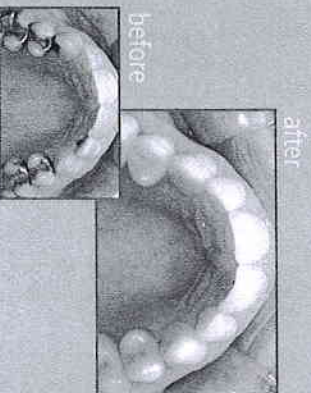

## CEREC Technology

CEREC is a superior method of creating precisely-designed, color-matched and highly durable ceramic restorations right in the dental office. CEREC allows you to avoid impression materials, temporaries and multiple dental appointments usually associated with cosmetic dentistry cases.

### FILLINGS

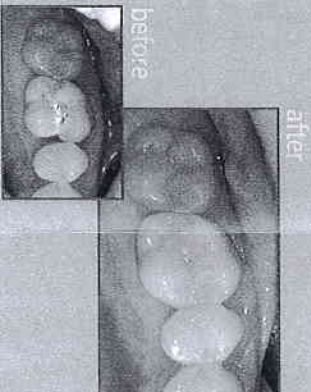

CEREC fillings can be used instead of traditional amalgam or composites to create a smooth, tooth-colored replacement of material lost to cavities bringing your tooth back to its natural strength.

Dentistry courtesy of Dr. James Kim

### CROWNS

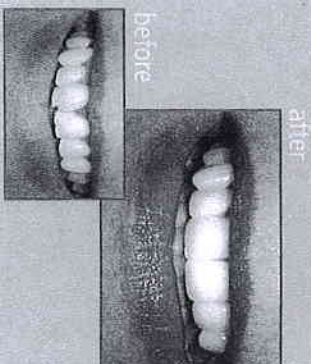

Unlike porcelain-fused-to-metal (PFM) crowns, CEREC is completely metal free. Although the PFM crowns mimic natural tooth appearance, the metal limits translucency and can sometimes show through as a dark line, especially through the gum line.

Dentistry courtesy of Dr. Rich Masak

### VENEERS

CEREC veneers are a stronger, long lasting, permanent solution because its enamel-like material looks and feels more like real teeth.
